## Integrity

SHA-256: 3cfa8d95fa1523b94d2f6a32986cdeb3b98be4bd0016f32de9b6e235bf6a2fcc
SHA-256 of the ledger rows listed (id, at, kind, actor, summary, payload_json, paypal_event_id). The event_log table is append-only (DB triggers block UPDATE/DELETE/REPLACE); that is append-only, not tamper-proof.
PayPal invoice, order and capture ids can be looked up by the merchant account holder in PayPal (Invoices; Activity / transaction details). Data from the PayPal sandbox is test data, not real money.
